# 1、 Introduction

## 1.1 System Overview

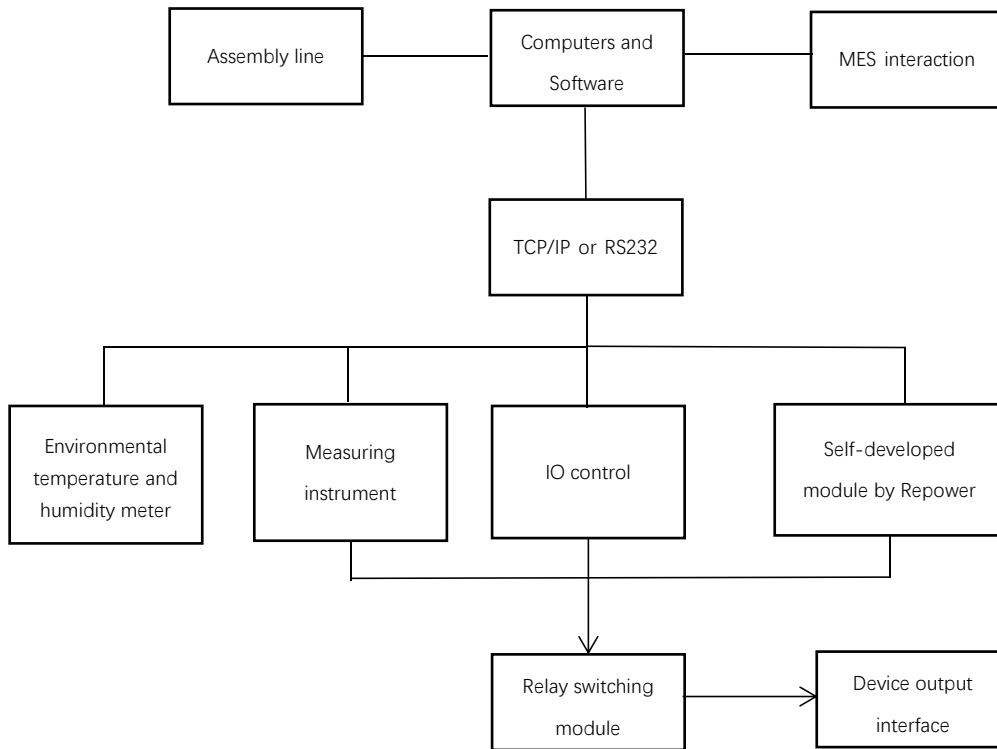

The EOL testing system is mainly used for offline testing and quality control of battery modules or packs for electric vehicles, buses, container energy storage, household energy storage, and mobile energy storage. A comprehensive and intelligent testing platform developed to integrate automatic testing, data recording integration analysis, production efficiency, and other aspects of lithium battery offline, providing a complete static testing solution for power battery modules or PACK; The unique features include safe, fast, and efficient, customized test data output format, linkage testing with charging and discharging testing equipment, seamless integration with factory MES, and simple software operation interface.

## 1.2 Basic testing process

**Note: The action process is for reference only and does not represent the scope of supply.**

**1.3 Equipment topology diagram**

**二、 Main components of the equipment**

**2.1 Main Equipment Configuration**

| Number | Unit Name                           | Brand        | Specification/Model                | Number | Unit |
|--------|-------------------------------------|--------------|------------------------------------|--------|------|
| 1      | Internal Resistance Tester          | Hantek       | HBT4563A/H                         | 1      | Pcs  |
| 2      | Insulation Withstand Voltage Tester | Ainuo        | BTS838                             | 1      | Pcs  |
| 3      | Temperature & Humidity Meter        | Jianda Renke | RJ45 Ethernet Port Recorder        | 1      | Pcs  |
| 4      | Computer                            | Dell         | CPU-I5 or above/16GB RAM/1TB HDD   | 1      | Pcs  |
| 5      | Monitor                             | Dell         | 21.5 inch                          | 1      | Pcs  |
| 6      | Barcode Scanner                     | /            | Supplier-defined compatible models | 1      | Pcs  |
| 7      | High Voltage Measurement Unit       | RePower      | RP-EOL-HVUnit                      | 1      | Pcs  |
| 8      | IO Module                           | RePower      | RP-EIO-128CH                       | 1      | Pcs  |
| 9      | Control Software                    | RePower      | RP-EOL-S/W                         | 1      | Pcs  |
| 10     | Cabinet                             | RePower      | EOL Cabinet                        | 1      | Pcs  |

|    |                     |         |              |   |     |
|----|---------------------|---------|--------------|---|-----|
| 11 | Equipment Harness   | RePower | EOL-MOD-SBX  | 1 | Pcs |
| 12 | Test Harness        | RePower | EOL-MOD-CSX  | 1 | Pcs |
| 13 | Master Resistor Box | RePower | RP-Master-01 | 1 | Pcs |

**Note: If Party A has requirements for the appearance and color of the equipment, Party A must provide a standard color card sample or color card number (except for electroplated parts and stainless steel). If there is no color requirement, the default color provided by Party B shall be followed.**

## 2.2 Special Material List

| Number | Unit Name      | Brand | Specification/Model                              | quantity | unit |
|--------|----------------|-------|--|----------|------|
| 1      | Connector      | \     | Blue battery docking connector                   | 2        | set  |
| 2      | Battery Module | \     | Blueprint battery module (used during debugging) | 1        | set  |

**Note: As the special materials are bound to the product to be tested, Party A or the final user of the equipment should purchase them themselves, and Party B is responsible for wiring.**

**2.3 Scope of Supply Description**

| Number | Item   | Line integration party or demand party | Testing equipment party |
|--------|--|--|-------------------------|
| 1      | Online Equipment Frame                               | V                                      |                         |
| 2      | Docking Fixture (High/Low Voltage Plugs)             | V                                      |                         |
| 3      | Needle Bed Fixing Mechanism & Mobile Servo           | V                                      |                         |
| 4      | Probe  | V                                      |                         |
| 5      | RFID & Automatic Scanning                            | V                                      |                         |
| 6      | Safety Light Curtain                                 | V                                      |                         |
| 7      | Test Instruments                                     |  | V                       |
| 8      | Industrial Control Computer (Mouse/Keyboard/Monitor) |  | V                       |
| 9      | Test Software  |  | V                       |
| 10     | Test Equipment MES Integration                       |  | V                       |

**Note: The boundary of the equipment supply scope is shown in the table above. During acceptance, the supply scope of the testing equipment shall be used as the boundary point for separate acceptance.**

**2.4 Explanation of the responsible party**

| Number | project  | Line integration party or demand party | Testing equipment party |
|--------|--|--|-------------------------|
| 1      | Connector skewed and misaligned, poor docking, and product scratches | V                                      |                         |
| 2      | Mechanism malfunction, servo positioning                             | V                                      |                         |
| 3      | Insufficient instrument accuracy, circuit failure in test cabinet    |  | V                       |
| 4      | Test results uploaded, testing machine MES interaction               |  | V                       |

### 3、 Applicable product specifications

#### 3.1 Compatible product specifications

| Number | Product Name      | Nominal voltage | Communication Protocol |
|--------|-------------------|-----------------|------------------------|
| 1      | Model A Prototype | 300V            | /                      |
| 2      | Model B Prototype | 300V            | /                      |

**Note: The product models that need to be installed and adjusted on site are listed in the table above. If the equipment has met the acceptance conditions, Party A or the final user of the equipment is still unable to provide the blue products in the table above to Party B for debugging work, the acceptance conditions required by the business shall prevail.**

### 4、 Technical parameters

#### 4.1 Basic Equipment Parameters

| 序号 | Item   | Technical parameter                           |
|----|--|---|
| 1  | Equipment size                                       | ≤850*800*1980mm (W*D*H)                       |
| 2  | Number of device channels                            | 1 channel                                     |
| 3  | Operation mode                                       | Manual wiring, software automatic testing     |
| 4  | Internal communication                               | LAN/RS232                                     |
| 5  | Product communication                                | CAN/CANFD(based on configuration list)        |
| 6  | Input voltage  | AC220V±10%, 50/60HZ or AC110V±10%, 50/60HZ    |
| 7  | Input power  | ≤2kW  |
| 8  | Protection rating                                    | IP32  |
| 9  | Cooling method                                       | Air-cooled                                    |
| 10 | Security level                                       | Complies with EN60950 and GB4943 requirements |
| 12 | Equipment working environment temperature            | 0°C~45°C                                      |
| 13 | Device storage temperature                           | -10°C~70°C                                    |
| 14 | Maximum relative humidity during equipment operation | 30%~70% (RH non condensing)                   |

**4.2 Equipment functional parameters**

| Number | Unit Name                           | Brand   | Model         | Specification parameters  |
|--------|-------------------------------------|---------|---------------|---|
| 1      | Insulation Withstand Voltage Tester | Ainuo   | BTS838        | 1) AC Withstand Voltage (ACW): 5kV/100mA<br>2) DC Withstand Voltage (DCW): 6kV/10mA<br>3) Insulation Resistance (IR): 6kV/50GΩ  |
| 2      | Internal Resistance Tester          | Hantek  | HBT4563A/H    | 1) Voltage Range: 410VDC<br>2) Resistance Range: 3600Ω  |
| 3      | High Voltage Measurement Unit       | RePower | RP-EOL-HVUnit | 1) Modular design with effective electrical isolation for high-voltage test circuits<br>2) All outputs fused for short-circuit/overload protection<br>3) Relay cards support quick replacement and channel expansion                      |
| 4      | IO Module                           | RePower | RP-EIO-128CH  | 1) Digital Output Module with High Voltage Isolation Technology (Anti-Breakdown)<br>2) High-Speed MCU Chip for Rapid Response<br>3) TCP/IP Communication Protocol for Secure & Stable Connectivity  |
| 5      | Control Software                    | RePower | RP-EOL-S/W    | 1) RePower EOL Testing Software<br>2) Supports Local Data Export, MES Data Upload Service, etc.<br>3) Supports Rapid Recipe Switching for Different Products Under Test<br>4) Two test product debugging services are provided by default |

|   |                     |         |              |   |
|---|---------------------|---------|--------------|---|
| 6 | Master Resistor Box | RePower | RP-Master-01 | <ol style="list-style-type: none"> <li>1) Insulation Resistance: 50MΩ, 200MΩ, 700MΩ</li> <li>2) DC Withstand Resistance: 1MΩ, 4MΩ</li> <li>3) AC Withstand Resistance: 500kΩ, 1MΩ</li> <li>4) External, Manual Wiring, Automatic Inspection by Host Software</li> </ol> |
|---|---------------------|---------|--------------|---|

**4.3 System testing items**

| <b>Number</b> | <b>Test items</b>  | <b>Function Description</b>   | <b>Testing instruments</b>          |
|---------------|--|---|-------------------------------------|
| 1             | Fixture fixed-point                                      | Test fixture to battery module fixed point  | Manual                              |
| 2             | Total Voltage/AC Internal Resistance Test                | According to the predefined test plan, measure total module voltage and AC internal resistance via relay-switched internal resistance tester.   | Internal Resistance Tester          |
| 3             | Total Positive/Negative to Ground Insulation Test        | According to the predefined test plan, connect module's total positive/negative terminals to the withstand voltage tester's positive pole and module ground to the negative pole via relay switching. | Insulation Withstand Voltage Tester |
| 4             | Total Positive/Negative to Ground Withstand Voltage Test | According to the predefined test plan, connect module's total positive/negative terminals to the withstand voltage tester's positive pole and module ground to the negative pole via relay switching. | Insulation Withstand Voltage Tester |
| 5             | Test data upload   | Upload test data to the MES system.   | \                                   |

**Note: The EOL testing system is a customized equipment, and the equipment configuration and function shall be based on meeting the testing items specified in the table above. Any additional items shall be evaluated and confirmed by Party B. Additional items shall not be used as acceptance criteria for this agreement.**

## 4.4 Standard functional requirements

### 4.4.1 General Hardware Functions

- 1) The equipment is equipped with insurance and an external AC switch, which has anti leakage and human protection functions;
- 2) The equipment is equipped with a bus emergency stop switch and hardware emergency stop function;
- 3) All high and low voltage relays in the equipment configuration are set to normally open by default to prevent unexpected situations;
- 4) The wiring harness of the device connected to the positive and negative terminals of the battery, as well as the box, is equipped with fuses to prevent accidental situations;
- 5) Module/Pack safety, voltage, temperature, faults, and other abnormalities, equipment stops testing and sound and light alarms;
- 6) The temperature of the module/pack testing environment is extremely abnormal, and the equipment stops testing with an audible and visual alarm;

### 4.4.2 General software functions

- 1) Provide four modes: automatic, manual, debugging, and automatic idle operation (without the need for materials and equipment to operate in a safe state). Switching between operating modes requires different permissions;
- 2) Provide reasonable production control strategies and propose reasonable handling measures for various situations that can be encountered in production;
- 3) Provide comprehensive fault diagnosis functions. When equipment testing malfunctions, the control panel can indicate the type and location of the fault, and provide specific handling methods if necessary;
- 4) Collect and display production information, such as current output, planned output, process optimization rate, etc;
- 5) Can accurately identify and distinguish the barcodes of modules, and save their respective data according to the barcodes;

## 5、 System diagram

### 5.1 Equipment appearance rendering

(Subject to the physical product)

### 5.2 Software interface

## **6、 Equipment pre acceptance and final acceptance standards**

If Party B completes the debugging and trial operation for 30 days without any abnormal problems, it can enter the acceptance process and execute according to the relevant provisions of the technical agreement.

The acceptance shall be carried out by designated engineering and technical personnel from both parties, who shall jointly sign the acceptance report.

Acceptance mainly involves the acceptance of various functions, technical indicators, and appearance of the equipment.

If due to the reasons of Party A, if Party A does not have the production conditions, does not have corresponding products for Party B to debug, or is unable to provide installation and debugging conditions, Party A still does not notify installation within 30 days from the date of equipment delivery, or does not notify debugging within 30 days from the date of installation completion, it shall be deemed that the product acceptance is qualified.

## **7、 Installation, debugging, and training**

Unless otherwise requested in writing, Party A shall be responsible for receiving; And prepare relevant electricity, gas, and other equipment input terminals.

The second party is responsible for delivering the goods to the location designated by the first party, the first party assists in transporting the machines to the installation site, and the second party carries out the installation and debugging of the equipment.

The first party shall provide the second party with raw materials that can meet the requirements for debugging the machine, including the prototype battery to be tested, BMS communication protocol, DBC files, UDS unlocking algorithm, testing process requirements documents, etc.

After installation, both parties shall conduct small-scale trial production of their equipment. Only after the small-scale trial production is qualified and approved by Party B can it be put into formal mass production.

The second party shall provide free training to the relevant personnel of the first party, including the normal use, maintenance, fault analysis and troubleshooting, operation safety, and emergency handling procedures of the equipment. The first party must arrange for technical leaders, engineers, operators and other personnel who may use the equipment to be present and cooperate with the training, and sign and confirm on the "Equipment Training Attendance Form" provided by the second party.

## 8、 Quality assurance and after-sales service

The warranty period for the equipment is one year, during which Party B is responsible for free maintenance and repair of the equipment (excluding vulnerable parts). The second party guarantees to respond by phone within 2 hours and submit a solution within 4 hours after receiving the equipment failure notice from the demand side; If necessary, rush to the buyer's site for maintenance within 48 hours.

After the warranty period expires, Party B shall still be responsible for repairing and maintaining the equipment, but shall only charge reasonable working hours and related travel expenses. For the replacement and purchase of equipment related accessories, Party B shall only charge the cost of accessories.

The second party will provide timely after-sales service by providing 24-hour technical support personnel on duty telephone.

## 9、 Confidentiality clause

The first party shall strictly keep confidential any trade secrets of the seller that they become aware of as a result of the performance of this agreement, including but not limited to equipment technical parameters, configuration standards, equipment prices, product specifications, etc. Without the written consent of Party B, no information known during the cooperation shall be disclosed to any third party. If Party A violates the provisions of this agreement and leaks Party B's trade secrets, Party A shall compensate Party B for its direct losses. This clause shall remain valid for five years after the termination of this agreement.

## 10、 Other matters and agreements

This agreement shall be authorized, signed and stamped by both Party A and Party B, and shall come into effect simultaneously with the signing of the business contract.

This agreement, as an appendix to the business contract, is made in duplicate, with Party A holding one copy and Party B holding one copy. Any matters not covered in this agreement shall be resolved through consultation between both parties.
